- Java, VB.Net
- Basic Computer Literacy (Microsoft Digital Literacy)
- Computer Hardware Skills
- Workstation Technical Skills (ICT1531)
- Network Technical Skills (ICT1532)
- Linux (ICT2631)

Work Experience

Web Developer

Motswako Communications

Mar 2023

- I worked on this project free of charge in order for me to gain experience. The client's requirements kept changing, there were times when I did not agree with the design specifications but because it's what the client wants I had to deliver regardless of how I felt.
- I would design the entire project according to the client's requirements, only for them to change their mind the next day and agree with my initial suggestions. This meant I had to redo the whole thing again. At times, I felt like crying, but I appreciated the experience because I knew this was something I would constantly face in my field. The client was essentially training me to become more patient and resilient

FST Auto Service (partnered with Bosch Car Service) – UNISA Project

Jan 2022 – Sep 2022

- I achieved +95% pass mark for this project. The owner of the business was impressed that he asked that I develop an e-commerce website for his new business.
- I designed everything including the textual content for the site, but the graphical content was supplied by Bosch Car Service

Web-based Database Application for a minimal Stokvel (School Project)

- Below were the requirements:

“The application must consist of three components:

1. Users of the stockvel: Use a database table to store members of the stockvel. The application should allow adding new users, viewing all users, deleting existing users, and updating existing users.
2. Monthly contributions: Use a database table to record contributions made by the members of the stockvel. The application should allow adding new contributions, viewing all contributions, deleting contributions, and updating contributions.
3. Financial status: This element should allow a user to view the financial status of the stockvel. It should display the total amount currently saved in the stockvel as well as a summary of what each member has paid to the stockvel at a given time. Design the application using model view controller pattern.”
