- Java, VB.Net
- Basic Computer Literacy (Microsoft Digital Literacy)
- Computer Hardware Skills
- Workstation Technical Skills (ICT1531)
- Network Technical Skills (ICT1532)
- Linux (ICT2631)

Work Experience

Web Developer

Motswako Communications

Mar 2023

- Programming Languages: JavaScript
- Approached a business owner to provide my web development services on a voluntary basis.
- The project's requirements frequently changed, and I had to adapt by applying iterative development. I interpreted the client's vision for the site through models and implemented through code.
- The overall experience was eye opening and educational – learning that building a website is more than just coding.

FST Auto Service (partnered with Bosch Car Service) – UNISA Project

Jan 2022 – Sep 2022

- Programming Languages: JavaScript (+AJAX)
- I achieved +95% pass mark for this project. The owner of the business was impressed that he asked that I develop an e-commerce website for his new business.
- I designed everything including the textual content for the site, but the graphical content was supplied by Bosch Car Service

URL: <https://thephoenix911.github.io/boschCarService/index.html>

Web-based Database Application for a minimal Stokvel (School Project)

- Programming Languages: PHP, JavaScript, MySQL
- Achieved +90% for this project
- Project requirements:

The application must consist of three components:

1. Users of the stockvel: Use a database table to store members of the stockvel. The application should allow adding new users, viewing all users, deleting existing users, and updating existing users.
2. Monthly contributions: Use a database table to record contributions made by the members of the stockvel. The application should allow adding new contributions, viewing all contributions, deleting contributions, and updating contributions.
3. Financial status: This element should allow a user to view the financial status of the stockvel. It should display the total amount currently saved in the stockvel as well as a summary of what each member has paid to the stockvel at a given time. Design the application using model view controller pattern.

Amandla Locker Booking System (School Project)

- Programming Languages: PHP, JavaScript, MySQL

- Locker Booking System that allows parents to book a locker for the students.
- Admin can register a student/parent, book a locker, and suspend a locker (if the locker fee is not paid within 30 days)
- Available: <https://amandlahschool.infinityfree.me/>

App Developer

Bingo Game (School Project)

- Programming Language: Java, XML
- Achieved +90% for this project
- An android game that generates random unique numbers until a bingo is called.
The user can view a list of called numbers and if it's a bingo, calls **Bingo!!!**
